

14:03 - start meeting

Chair: Eva

Minutes: Koen

---

We are going to talk about the feedback on the poster. The numbering of the figures was a little all over the place, so we fixed that. A lot of people said that we have too little text or too many figures, but Nicco said more figures is better. So we'll update the subscripts of the figures and focus on explaining well during the presentation. They talked about a fitting of our graph, but that's not how we obtained our data. We don't even have any errors, we just have the five data points.

Some said the discussion was too short and some said too long, so we'll just keep it how it is. The main thing we're getting here is we want to explain most things spoken during the presentation. Nicco said we shouldn't have a lot of text on our poster.

Eva: we should remove our names from the graph, which were put in for clarity during the lab work. We are discussing if we should put the entire names of our plants. Jasmijn thinks we could maybe put it in some legend, but Eva says probably no one will care about the entire name. The conclusion is we'll keep it without.

Eva says many people don't understand photosynthesis enough to get a grasp of the introduction. Mads says explaining that is another poster on itself. We'll reference the animation to people that want to know more about it. Eva notes that the animation deadline is a lot later than the poster deadline, but the QR-code for the animation should be on the final poster. So that's kinda weird.

Nicco said our figure 2 is not that good, so we'll find a better Jablonski diagram. Eva says she thinks we got the important things out of it now.

---

Eva closes at 14:27 with the words: 'It's extremely nice weather today, go outside!'
